

BORN ITALIAN, WE GROW UP WORLDWIDE

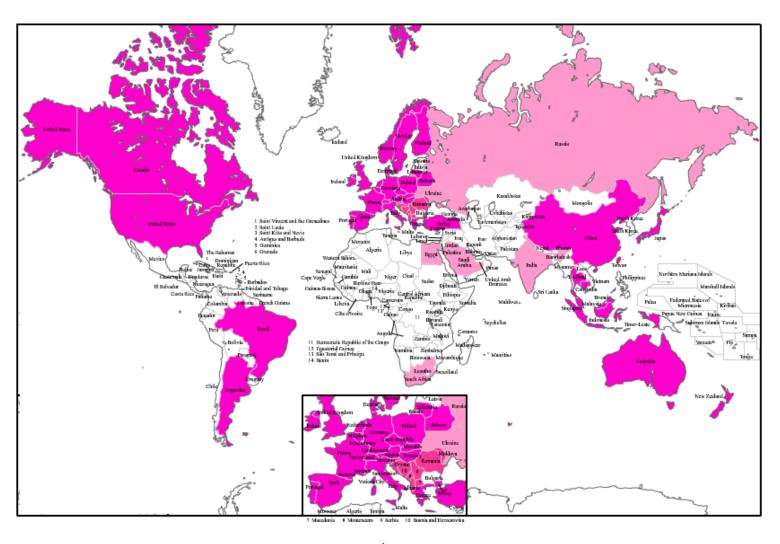

NUMBERS

- 33 years of experience
- 25 employees
- 35 skilled workers
- 2013 production: more then 25.000 units
- Registered trademark in all Europe ®
- 5 subsidiaries
- 50 worldwide retailers

PRESENCE WITHOUT BORDERS

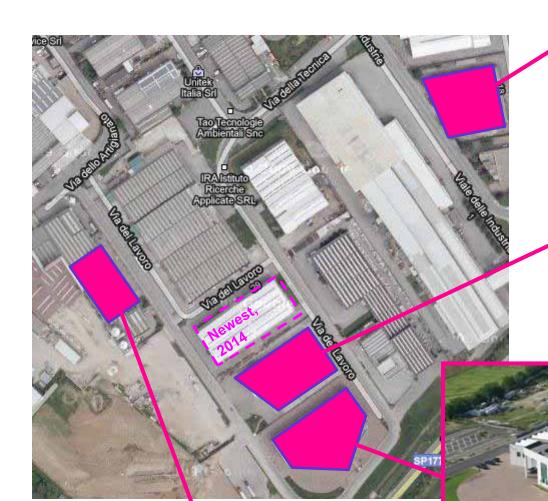

UNIMEC HEADQUARTER

20.000 mq total (11.000 mq covered)

RANGE OF PRODUCTS

MECHANICAL SCREW JACKS

- Model: TP, TPR;
- Complete range: 14 sizes (from 18x3 to 250x22). Special spindle: diameters and pitches on demand
- Carrying capacity: from 500Kg to 200 Tons
- Spindle lenght: from few mm to 12 metres
- Accessories: Protection, Mounting (standard and special)

HIGH QUALITY MATERIALS

- 16NiCr4 casehardened and grinded worm screw → high geometrical precision, high wear resistance, high superficial hardness
- CuAl10Fe2 worm wheel → self lubricant performances (Cu) and high mechanical resistance (Al and Fe)
- Rolled C45 spindle → superficial hardening, crystal lattice continuity, better finishing, roughness equal to grinding, better wear resistance (due to bench hardening)
- GLJ 250 completely machined carter (over 9010 size carter is in electronically welded steel)

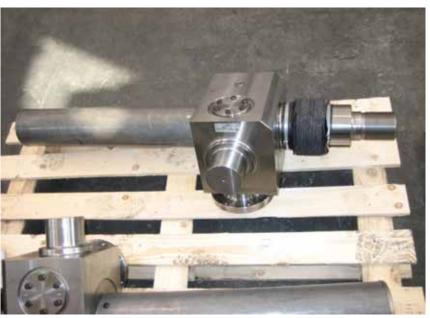

Screw jack with incorporated load cell

SPECIAL IS ORDINARY

38NiCrMo5 Carter with enbloc pins

ALEPH SERIES

- Unimec screw jacks in polymer: 3 sizes, various ratios, load from 700 daN up to 1.800 daN per single jack.
- It can work dry (without lubricant).
- Direct motor connection.
- Stainless steel configuration for food industry.
- Cheaper with maintaining the high quality of the products.

SCREW JACKS FOR BALL SCREWS

- It is **reversible**: it has high efficiencies and so it's good for heavy cycles (high speeds).
- It is universal: three only sizes are enough for the assembling of 25 different sizes of ball screws, of whatever brand you desire.
- It is unique: there isn't a screw jack builder, except Unimec, that has designed a jack specifically for a ball screw.
- It is tecnical: it's important to propose it to customers but ask for technical office support.

BEVEL GEARBOXES

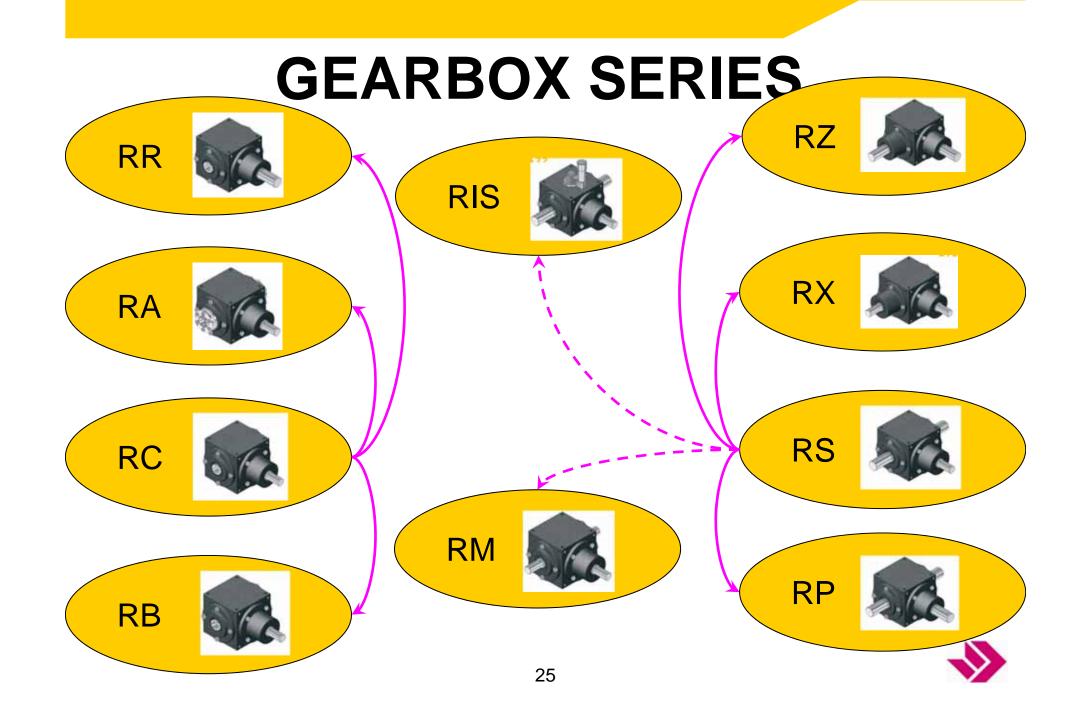

• **Power**: up to 1.650 kW

Gear ratio: from 1/1 to up to 1/12.

- Gleason toothing: thanks to its geometry, it better distributes tooth strength during transmission: helix allows a softer meshing and variable thickness makes tooth more rugged where it needs (at its base).
- For all models it's possible to apply motor flanges (standar/special): Brushless motor, Nema motors, reducers, hydraulic motors.

SPECIAL IS ORDINARY

STAINLESS STEEL SERIES

- 204, 306 and 407 sizes (screw jacks) and 86, 110 and 134 (gearboxes) are available, by series, completely in <u>AISI 316</u> (+40% expansive on the most common AISI 304)
- Every component can be realized in stainless steel, but with growing times and prices

SPEED MODULATION GEARBOXES

- **3 sizes**: 32,42 e 55
- 5 model and 85 construction forms.

COUPLINGS

- High torsion stiffness blade couplings.
- Resistance to corrosive agents, absorption of vibrations;
- Use in any temperature;
- Absorb axial and parallel movement errors.

- R+W PARTNERSHIP = top qualities couplings and shaft;
- Resistance to corrosive agents, absorption of vibrations;
- Use in **any temperature**;
- Absorb axial and parallel movement errors.

PRE SALES

Size finder

App

Summary brochure

3D Archives

PRE SALES

www.unimec.eu

- Five languages;
- → Three landing page (Turkish, Czech and Korean);
- Complete;
- Always actual (with news) = dynamic factory
- Free 2D and 3D drawing download

PRE SALES

AFTER SALES

Top repairability

Warranty

NORMS

- ROHS (applied)
- **REACH** (non dangerous substances)
- MACHINES
- ATEX (always fullfill the questionnaire)
